Announcements

- Office hours
 - Mon, Wed, 11:30-12:30 am
 - Sun, Tue, Thu 12:00-1:00 pm
- Reading
 - Chapter 1, focus on Sections (1.4), **(1.5)** and (1.6)
- Suggested Problems
 - 23,25,27,29,31,33,35,37,39,41,43,45,47,49,51,53,
59,61,67,69

Quiz 1: Estimate room temperature (~72° F) in ° C.

- ~ 15° C
- ~ 22° C
- ~ 27° C
- ~ 32° C
- ~ 37° C

Quiz 2 :Which represents the largest volume?

- 0.25 L
- 2.5×10^2 mL
- 2.5×10^6 μ L
- 2.5×10^8 nL
- 2.5×10^{10} pL

Significant Figures

- The term **significant figures** refers to digits that were measured.
- When rounding calculated numbers, we pay attention to significant figures so we do not overstate the accuracy of our answers.

Matter
And
Measurement

©2009, Prentice-Hall, Inc.

Significant Figures

1. All nonzero digits are significant.
2. Zeroes between two significant figures are themselves significant.
3. Zeroes at the beginning of a number are never significant.
4. Zeroes at the end of a number are significant if a decimal point is written in the number.

Matter
And
Measurement

not significant:

zero for "cosmetic"
purpose

not significant:

zero used only to
locate the decimal
point

significant:

all zeros between
nonzero numbers

0.0030007400

significant:

all nonzero integers

significant:

zeros at the end of a
number to the right of
decimal point

Matter
And
Measurement

Significant Figures

- When addition or subtraction is performed, answers are rounded to the least significant **decimal place**.
- When multiplication or division is performed, answers are rounded to the number of digits that corresponds to the **least number of significant figures** in any of the numbers used in the calculation.

Sample Exercise 1 Relating Significant Figures to the Uncertainty of a Measurement

What difference exists between the measured values 4.0 g and 4.00 g?

©2009, Prentice-Hall, Inc.

Practice Exercise

A balance has a precision of ± 0.001 g. A sample that has a mass of about 25 g is placed on this balance. How many significant figures should be reported for this measurement?

©2009, Prentice-Hall, Inc.

Sample Exercise 2 Determining the Number of Significant Figures in a Measurement

How many significant figures are in each of the following numbers (assume that each number is a measured quantity):
(a) 4.003, (b) 6.023×10^{23} , (c) 5000?

©2009, Prentice-Hall, Inc.

Practice Exercise

How many significant figures are in each of the following measurements:

(a) 3.549 g, (b) 2.3×10^4 cm, (c) 0.00134 m³?

©2009, Prentice-Hall, Inc.

Sample Exercise 3: Determining the Number of Significant figures in a Calculated Quantity

The width, length, and height of a small box are 15.5 cm, 27.3 cm, and 5.4 cm, respectively. Calculate the volume of the box, using the correct number of significant figures in your answer.

©2009, Prentice-Hall, Inc.

Practice Exercise

It takes 10.5 s for a sprinter to run 100.00 m. Calculate the average speed of the sprinter in meters per second, and express the result to the correct number of significant figures.

©2009, Prentice-Hall, Inc.

Sample Exercise 4 Determining the Number of Significant figures in a Calculated Quantity

A gas at 25°C fills a container whose volume is $1.05 \times 10^3\text{ cm}^3$. The container plus gas have a mass of 837.6 g. The container, when emptied of all gas, has a mass of 836.2 g. What is the density of the gas at 25°C ?

Accuracy versus Precision

- **Accuracy** refers to the proximity of a measurement to the true value of a quantity.
- **Precision** refers to the proximity of several measurements to each other.

Good accuracy
Good precision

Poor accuracy
Good precision

Poor accuracy
Poor precision

Matter
And
Measurement

A student measured the concentration of a solution three times, obtaining values of 0.010 M , 0.060 M , and 0.030 M . The average concentration was thus 0.033 M . The accepted value was 0.034 M . The student's data has:

- good accuracy and good precision.
- poor accuracy but good precision.
- poor accuracy and poor precision.
- good accuracy but poor precision.
